

Arango AutoGraph Studio

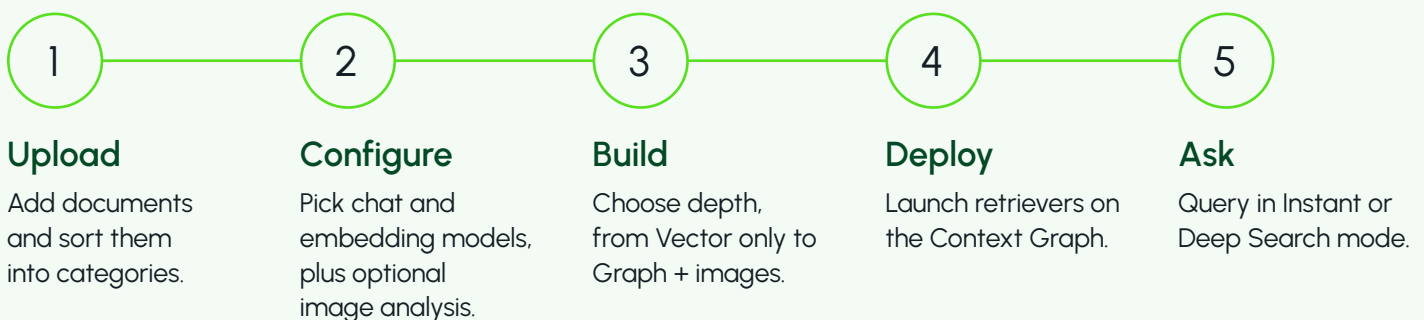

From documents to a queryable context graph in one workflow.

Arango AutoGraph Studio is the web interface in the Agentic AI Suite that turns enterprise documents into an AI-ready Context Graph, then optionally deploys retrieval-augmented generation (RAG) retrievers on top of it. One

guided workflow covers upload, model configuration, graph building, retriever deployment and querying, so AI teams move from raw content to grounded answers without stitching tools together.

How it Works

Outcomes and Benefits

What AI teams get from one guided workflow.

Outcome	What it means for your team	Powered by
One workflow, not a toolchain	Upload, build, deploy and query in one interface, with no separate graph, vector and retrieval tools to integrate.	AutoGraph Studio
Graph results, no graph specialists	AutoGraph extracts entities and relationships and picks a strategy for each cluster, so there are no ontologies to hand-build.	AutoGraph + RAG Strategizer
Cost and depth matched to the job	Choose Vector only for speed and cost, or Graph + images for depth, project by project.	Build complexity settings
Grounded, traceable answers	Answers draw on entities, relationships and source documents, supporting explainability and audit.	Context Graph
The right mode for every question	Instant for fast, single-pass answers. Deep Search for complex, multi-hop questions.	AutoRAG + Deep Search
Start with the graph, grow into retrieval	Stop at the Context Graph or add retrievers later, then automate with the Importer and AutoRAG application programming interfaces (APIs).	Two-stage workflow

Know Your Graphs

Corpus Graph

Documents, chunks and clusters extracted from your content.

+

Knowledge Graph

Entities and relationships (GraphRAG) or embeddings (VectorRAG), built for each cluster.

=

Context Graph

The complete, AI-ready foundation your agents reason over.

Why AutoGraph Studio

Faster to first answer

A guided path from raw documents to a queryable graph.

Simpler to run

One interface replaces separate AutoGraph and GraphRAG tools.

Built to grow

Start graph-only, add retrievers, then automate through the APIs.

Ready to see your documents as a context graph?

See AutoGraph Studio turn your content into grounded answers.
